SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript, C++
Frameworks: Spring, Spring Boot, FastAPI, Django, React, Next.js
Tools and Technical Skills: Git/GitHub, Docker, CI/CD, Linux/Unix, Postman, PyTest, JUnit, PostgreSQL, MySQL, Prisma, SQLAlchemy, Redis, Celery

EXPERIENCE

Software Engineer Intern at TQueue Software ***June 2024 – August 2024***

- Developed and maintained RESTful APIs using Spring Boot for a customer queue management system that served as the primary API layer for the core product
- Refactored the customer management module into a more service-oriented architecture, reducing technical debt
- Wrote unit and integration tests using JUnit, increasing test coverage on the customer service module from near zero to roughly 70%

PROJECTS

Feature Flag & A/B Testing Service| Java, Spring Boot, PostgreSQL, Redis, Docker| GitHub

- Built a flag evaluation engine supporting different targeting rules with priority-ordered evaluation and consistent hash-based variant assignment, ensuring users always receive the same A/B variant across requests
- Implemented real-time flag update delivery to connected clients via Server-Sent Events with automatic Redis cache validation on flag changes, eliminating the need for client-side polling
- Built Redis caching layer keyed by flag and user ID with a 5-minute TTL, short-circuiting database reads on repeat evaluations for sub-millisecond response times at scale
- Secured all endpoints with stateless JWT authentication via Spring Security filter chain and wrote integration tests using Testcontainers against live PostgreSQL and Redis instances in CI via GitHub Actions

SwingVision - AI Golf Swing Analyzer | Next.js, Python, PostgreSQL, Redis, MediaPipe, BetterAuth, Prisma| GitHub

- Built a Python worker using OpenCV and MediaPipe to overlay real-time AI pose skeletons on user uploaded golf swing videos to analyze swing mechanics
- Integrated Redis based async task queue to offload video processing, keeping web response times under 200ms during heavy load
- Architected a PostgreSQL (Neon) schema to manage user accounts, video metadata, and professional coaching feedback with relational integrity
- Implemented role-based access control using Next.js and BetterAuth, supporting separate user and admin dashboard experiences

EDUCATION

Arizona State University – Tempe, AZ | B.S. in Computer Science | May 2027 | GPA: 3.86
